5. Miscellaneous

# The AV Workflow

---

# Workflow

# Invenio Video Toolkit

---

- Transcoding
  - *start\_encoding*
  - *stop\_encoding*
  - *get\_encoding\_status*
- *extract\_metadata*
- *extract\_frames*
- Configured as import strings, in order to allow **multiple backends**

## Contribution

This work will lead to the creation of a general video toolkit for *Invenio*, which will include the wrappers for **FFmpeg** and **Sorenson**.

# Server-sent Events (SSE)

---

# Motivation

- A way to update the UI **asynchronously**
- Better alternative to polling
  - Responsive
  - Data-driven

- Channel per project
- Type per task
- Access rights

## Contribution

Basic SSE functionality and integration with *InvenioDeposit* is implemented on the new *Invenio* module **InvenioSSE**.

# Tasks

---

## Extended REST API of *InvenioWebhooks*

- `hooks/receivers/<rid>/events/<eid>/tasks/<tid>`
- Allows fine-grained control of individual tasks on a single event
- **DELETE** → cancel
- **PUT** → restart

Extended *Celery's* task base class for SSE integration.

Overloaded some task methods to additionally send appropriate SSE:

- *update\_state*
- *on\_success*
- *on\_failure*
- *on\_revoke*

# Cancelable/Undoable Tasks

Extended *Celery's* task base class for safe cancel/undo.

- Every task must implement the **clean** method, which should undo any side-effects from its execution.
- Imposes explicit resource management

## Miscellaneous

---

# File Tags

- Store video's metadata
- File relationships (e.g. *master*, *slave*)
- File types (e.g. *video*, *frame*)

## Contribution

Tags were added as an extra feature in [InvenioFilesRest](#).

- Defined new schemas for **Project** and **Video**
- Inspired by widely-used solutions (e.g. Google, YouTube, schema.org)

# Report Number Generation

- **Project**
  - Report number is automatically generated on publish
  - Uses the record's metadata (i.e. *category*, *type*, *year*)
- **Video**
  - Utilizes the hierarchical sequences, offered by *InvenioSequenceGenerator*
  - Child sequence of *Project*
